## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Specification*

1. The abstract of the disclosure is objected to because the abstract contains phrases "This invention relates to" in line 1 and "The present invention makes use" in line 13-14 which can be implied. Correction is required. See MPEP § 608.01(b).

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-11, 13-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ungs (5,866,561) in view of Reed et al. (6,197,013). Ungs discloses a method of using estrogen compounds to reduce the risk of restenosis wherein an estrogen compound may be coated on a stent and placed at the desired delivery site, temporarily or permanently (col. 2, lines 40-46) and the preferred compounds is 17-Beta Estradiol (col. 4, lines 10-11). Although, Ungs does not disclose a CVD process for coating the inner and outer surface of the stent, attention is directed to the Reed et al. reference which teaches using a CVD process for coating a stent (col. 9, lines 45-58). Also, CVD process is a well-known process in the art for coating an intravascular device with a compound. Therefore, it would have been obvious to one having ordinary skill in the art

at the time the invention was made to use a CVD process for coating the Unga stent. Doing so would carry out all the steps as claimed in claims 14-31.

In regard to claims 4-5, it is well known in the art to select a different quantity of drug or treating material for treating a surgical site at certain healing time. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to increase or decrease the quantity of 17-Beta Estradiol in order to control the healing rate as desired at a surgical site.

***Allowable Subject Matter***

4. Claim 12 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: the prior art fails to disclose or suggest an adhesive layer contains DLC for supporting 17beta-estradiol on the stent surface.
